GERMÁN KÜBER

Engineering Manager — Staff Software Engineer — Hands-on Technical Leader

Las Palmas, Spain (EU Citizen) — Remote — EU / Americas (UTC-5 to UTC+2) — +34 666 844 731
german.kuber@gmail.com — linkedin.com/in/germankuber — github.com/GermanKuber — germankuber.com

PROFESSIONAL SUMMARY

Engineering Manager and Staff-level hands-on technical leader with 15+ years building production distributed systems and managing engineering teams. Player-coach across blockchain, AI, and enterprise platforms: managed teams of up to 8 engineers including hiring, performance feedback, and delivery, while remaining active in **Rust, Python, Node.js / TypeScript and .NET** codebases. Track record across high-stakes domains, from low-latency MEV infrastructure processing $50M+ in daily on-chain volume, to real-time LLM platforms with multi-provider orchestration. Microsoft MVP for 8 consecutive years, founder of Argentina's largest .NET community (100K+ members), and Polkadot Blockchain Academy graduate (Lisbon, 2026).

CORE EXPERTISE

Engineering Leadership: Team management and scaling, hiring and technical interviewing, performance reviews and feedback cycles, mentoring and career development, cross-functional collaboration, technical roadmap, architectural decision records (ADRs), on-call and incident response

Programming Languages: Rust, Python, Cython, Node.js / TypeScript, C# / .NET, JavaScript, Go, Solidity, Cairo

AI / LLM Systems: LLM orchestration (OpenAI, Anthropic, Gemini), LangChain, LangGraph, RAG pipelines, multi-agent architecture, real-time audio pipelines, multi-provider routing, prompt engineering, inference cost optimization

Frontend: React, Angular, TypeScript, reusable component libraries, UI architecture

Blockchain: Polkadot SDK, Substrate, FRAME, XCM, parachains, EVM, Solana, MEV infrastructure, Zero-Knowledge proofs (Noir, Barretenberg), StarkNet, account abstraction

Distributed Systems: High-throughput pipelines, async runtimes (tokio), concurrency, low-latency networking, fault tolerance, microservices, event-driven architectures, Domain-Driven Design

Cloud & Infrastructure: AWS, Azure, Docker, Kubernetes, Prometheus, OpenTelemetry, FastAPI, SignalR, CI/CD pipelines, observability stacks

PROFESSIONAL EXPERIENCE

Lead AI Architect & Co-Founder

KliverAI (Own Venture, closed Apr 2026) — Apr 2025 – Apr 2026 (full-time) — Remote, Spain

- Hired and managed a distributed team of up to 3 engineers, owning technical interviews, final hiring decisions, structured feedback cycles, and delivery planning.
- Owned technical strategy, architectural decisions, and delivery as the senior-most engineer; built the platform end-to-end on a polyglot stack (Node.js / TypeScript, Python, .NET, Kubernetes, AWS).
- Architected real-time audio pipelines using OpenAI Realtime API and SignalR, achieving sub-200ms streaming latency across concurrent user sessions.
- Built an adaptive simulation engine with multi-agent architecture on LangGraph, including multi-step branching logic and RAG-powered personalization for training scenarios.
- Integrated three LLM providers (OpenAI, Anthropic, Gemini) with dynamic model routing for cost and performance optimization.
- Designed a Zero-Knowledge proof system (Noir, Barretenberg, Garaga on StarkNet) for verifiable expert credentials in a decentralized evaluation marketplace.
- Shipped a Chrome Extension for real-time Google Meet capture, streaming transcripts via WebSocket into an automated evaluation pipeline.

Fractional CTO (Part-time, hands-on)

Rocking Product — Apr 2025 – Nov 2025 (part-time, parallel to KliverAI) — Remote / Buenos Aires

- Inherited an 8-person engineering team across backend, frontend, and DevOps; restructured roles, rituals, and delivery workflows over the first quarter, stabilizing release cadence and reducing sprint carryover.
- Hired additional engineers to expand and rebalance the team, conducting technical interviews and owning final hiring decisions.
- Established hiring criteria, code review standards, structured feedback practices, and CI/CD pipelines adopted across the team while remaining hands-on in the codebase.
- Partnered directly with founders and clients to translate business priorities into technical roadmaps and compress discovery-to-delivery cycles.
- Shipped AI-powered features to production using Node.js / TypeScript and Python (FastAPI, LangChain), establishing the team's first LLM evaluation and monitoring practices.
- Introduced AI-driven development workflows with autonomous agents automating code review, testing, and deployment, reducing manual operational load.
- Optimized LLM usage and cloud infrastructure through model selection, prompt compression, and semantic caching, cutting combined API and cloud spend by 45%.
- Proposed and led a full-stack migration from a fragmented JavaScript codebase to .NET, modernizing the architecture for long-term scalability.

Lead Software Engineer (Blockchain / MEV)
Borderless Capital / CTF Capital — Aug 2021 – Apr 2025 — Remote

- Acted as technical lead for MEV infrastructure across EVM and Solana: owned architecture, code review, mentoring, and interviewing for blockchain hires while remaining hands-on in Rust (tokio, async) and Python/Cython.
- Owned 24/7 production reliability and incident response for trading-critical pipelines, including on-call rotation, post-mortems, and observability ownership.
- Pipelines processed 10K+ opportunities per day from $50M+ in daily on-chain flow and contributed $100K+ in attributable annual P&L with ultra-low-latency execution under 10ms.
- Built custom transaction delivery infrastructure with parallel broadcasting across RPC endpoints and direct validator/TPU routes, achieving sub-slot Solana inclusion (~400ms).
- Designed strategy logic for liquidation detection, multi-hop arbitrage across 5+ DEXs, and cross-chain flow modeling across EVM (Ethereum, Arbitrum, Optimism) and Solana.
- Engineered low-latency observability with Prometheus and custom Rust telemetry, tracking 50+ metrics in real-time for slot timing, validator rotation, and execution outcomes.
- Researched and prototyped Zero-Knowledge technologies and L2 ecosystems (StarkNet, Cairo, account abstraction), evaluating applicability for next-generation MEV tooling.
- Reverse-engineered Geth (Go-Ethereum) internals to improve transaction simulation and gas estimation accuracy for internal trading tools.

Senior Software Architect (Full-Stack)
Paramo Technology — Aug 2020 – Aug 2021 — Remote / Argentina

- Owned end-to-end architecture for a large-scale online casino platform, defining core systems, services, and organization-wide engineering standards.
- Led technical interviewing and hiring across the engineering organization, calibrating screening processes to scalability and regulatory needs.
- Designed and rolled out event-driven microservices using .NET handling real-time game state, wallet operations, and regulatory reporting with strict consistency requirements.
- Created and delivered internal training programs on architecture patterns, testing discipline, and operational best practices.
- Partnered with product, operations, and infrastructure teams to align technical roadmap with business growth, regulatory constraints, and platform reliability.

Software Architect (Full-Stack)
CloudX (Software Consultancy) — Aug 2017 – Aug 2020 — Buenos Aires

- Led architecture decisions across multiple enterprise product lines, designing Angular/React frontends with reusable component libraries and Node.js / TypeScript and .NET microservices backends using Domain-Driven Design.
- Delivered technical training and conference talks to partners and internal teams, and collaborated directly with clients on-site for requirements gathering and technical adoption.

Software Architect (Angular / .NET)
Majestic Hotel Group — Jan 2014 – Aug 2017 — Argentina

- Designed and shipped full-stack features in Angular and .NET for internal hotel management platforms; led the migration from AngularJS to Angular 4.
- Redesigned the data model and refactored backend workflows toward an event-oriented architecture, reducing coupling across integrations.

.NET Web Developer
Plus54 — Aug 2009 – Mar 2014 — Buenos Aires

- Early career: built .NET web applications, internal tooling, and mobile components end-to-end; integrated external APIs with unit testing and reliable data exchange patterns.

KEY ACHIEVEMENTS

Microsoft MVP, Developer Technologies — 8 consecutive years (2017–present), recognized for technical content and community contributions.

Net-Baires Founder — Founded and grew Argentina's largest .NET developer community to 100K+ members across 10+ years.

80+ International Technical Talks — .NET Conf, DevFest, NetCoreConf, vOpen, Global Azure Bootcamp, and meetups across LATAM and Europe.

Led teams of up to 8 engineers — Across blockchain, AI, and enterprise platforms, with full ownership of hiring, performance feedback, and delivery.

MEV Infrastructure at Borderless — Rust and Cython pipelines processing $50M+ in daily on-chain volume and contributing $100K+ in attributable annual P&L.

Polkadot Builder Program Graduate — Completed Polkadot Blockchain Academy in Lisbon, Portugal (2026).

Microsoft Student Partner — 5 years (2016–2021).

EDUCATION & CERTIFICATIONS

Polkadot Builder Program — Polkadot Blockchain Academy, Lisbon, Portugal (2026)

Systems Engineer — Universidad Abierta Interamericana (UAI), Buenos Aires, Argentina (2017–2021)

Microsoft MVP, Developer Technologies — Feb 2017 – Present (8 consecutive years)

OPEN SOURCE & COMMUNITY LEADERSHIP

Net-Baires (.NET Community) — Founder (2015–present). Argentina's largest .NET developer community, 100K+ members, 10+ years of monthly meetups and conferences.

Crypto Para Mortales — Founder (2023–present). Spanish-language blockchain and crypto education conference.

Patrones Para Mortales — Founder (2020–present). Educational content brand on software design patterns and architecture.

YouTube channel (youtube.com/@germankuber) — technical deep-dives on Rust, blockchain, AI, and software architecture.

SPOKEN LANGUAGES

Spanish: Native — English: Full Professional Proficiency — daily use in international remote teams
