GERMÁN KÜBER

Engineering Manager — Staff Software Engineer — Hands-on Technical Leader

Las Palmas, Spain · EU Citizen — authorized to work across the EU/EEA, no visa sponsorship required
Open to relocation within the EU (self-funded) · Remote-first · german.kuber@gmail.com
+34 666 844 731 · linkedin.com/in/germankuber · github.com/GermanKuber · germankuber.com

PROFESSIONAL SUMMARY

Engineering Manager and Staff-level hands-on technical leader with 15+ years building production distributed systems and managing engineering teams. Currently AI Architect at Nera, owning the company-wide knowledge and code-intelligence layer and driving Spec-Driven Development and evals-as-release-gate across engineering. Player-coach across blockchain, AI, and enterprise platforms: managed teams of up to 8 engineers including hiring, performance feedback, and delivery, while remaining active in **Rust, Python, Node.js / TypeScript and .NET** codebases. Track record across high-stakes domains, from low-latency MEV infrastructure processing $50M+ in daily on-chain volume, to real-time LLM platforms with multi-provider orchestration. Microsoft MVP for 8 consecutive years, founder of Argentina's largest .NET community (100K+ members), and Polkadot Blockchain Academy graduate (Lisbon, 2026). EU citizen (Spanish nationality) with full authorization to work across the EU/EEA — no visa or sponsorship required — open to self-funded relocation anywhere in the EU.

CORE EXPERTISE

Engineering Leadership: Team management and scaling, hiring and technical interviewing, performance reviews and feedback cycles, mentoring and career development, cross-functional collaboration, technical roadmap, architectural decision records (ADRs), on-call and incident response

Programming Languages: Rust, Python, Cython, Node.js / TypeScript, C# / .NET, JavaScript, Go, Solidity, Cairo

AI / LLM Systems: LLM orchestration (OpenAI, Anthropic, Gemini), LangChain, LangGraph, MCP (Model Context Protocol), knowledge graphs (Neo4j, pgvector), code graphs, RAG pipelines, multi-agent architecture, eval harnesses (LLM-as-judge), Spec-Driven Development (SDD), real-time audio pipelines, multi-provider routing, prompt engineering, inference cost optimization

Frontend: React, Angular, TypeScript, reusable component libraries, UI architecture

Blockchain: Polkadot SDK, Substrate, FRAME, XCM, parachains, EVM, Solana, MEV infrastructure, Zero-Knowledge proofs (Noir, Barretenberg), StarkNet, account abstraction

Distributed Systems: High-throughput pipelines, async runtimes (tokio), concurrency, low-latency networking, fault tolerance, microservices, event-driven architectures, Domain-Driven Design

Cloud & Infrastructure: AWS, Azure, Docker, Kubernetes, Prometheus, OpenTelemetry, FastAPI, SignalR, CI/CD pipelines, observability stacks

PROFESSIONAL EXPERIENCE

AI Architect

Nera — Feb 2026 – Present (full-time) — Remote

- Own Nera's AI architecture: the knowledge and code-intelligence layer that lets the whole company query the business in natural language, and the agentic tooling product and engineering use to go from problem to spec.
- Drove Spec-Driven Development (SDD) across engineering with a shared framework (specs, TDD, review gates) that standardized how features are built and raised quality team-wide.
- Made evals a release gate: record-and-replay harnesses, a 100-question benchmark for the knowledge graph, fidelity audits for the code graph and LLM-as-judge for generated PRDs.
- Designed and built a company-wide ontology (28 classes, 26 invariants) that ingests Notion, Jira and GitHub into a Neo4j knowledge graph plus a pgvector semantic index, giving every area end-to-end traceability from problem to PR and natural-language Q&A over MCP.
- Built a code graph of the entire microservice fleet (66 repos, 77k nodes, 210k relationships across Java, TypeScript and Go), enriched with runtime calls from OpenTelemetry and served through a 32-tool MCP server that engineers use to design features and product uses to write PRDs.
- Built an AI product-engineering platform where multi-agent LangGraph flows take a problem through PAD, PRD, epic and tech spec, grounded in the code graph and business knowledge; shipped AI tooling for product and design (Claude plugin for research and synthesis, Figma plugin auditing screens against the design system).
- Organized Nera's internal training space and gave talks on engineering cognition, LLM architecture beyond the prompt, Vertical Slice Architecture and HTTP internals.

Independent AI Consultant — Agent Engineering & Enterprise AI Delivery

Self-employed (autónomo, Spain) — Mar 2026 – Jul 2026 — Remote, client under NDA

- Forward-deployed AI consultant embedded with an enterprise engineering organization: work directly with the customer to run discovery with business and technical stakeholders, architect the solution, and own delivery from pilot through production and continuous iteration.
- Partner directly with engineering leadership to shape how the organization adopts AI agents — from framing the business problem to defining the delivery process and measuring outcomes.
- Introduced a Spec-Driven Development (SDD) framework across the delivery process — versioning, testing and distributing reusable agent skills, and standing up eval frameworks to measure the improvement they produce.
- Designed an end-to-end agentic pipeline from discovery to production deployment, with targeted human-in-the-loop checkpoints placed to guarantee quality.

Lead AI Architect & Co-Founder

KliverAI (Own Venture, closed Feb 2026) — Mar 2025 – Feb 2026 (full-time) — Remote, Spain

- Hired and managed a distributed team of up to 3 engineers; owned technical interviews, hiring decisions, structured feedback cycles, and delivery planning while owning technical strategy and architecture end-to-end on a polyglot stack (Node.js / TypeScript, Python, .NET, Kubernetes, AWS).
- Rewrote the real-time layer from app-embedded SignalR to Azure SignalR Service with Redis-backed state, scaling concurrent users by 500% while holding sub-200ms latency on audio pipelines.
- Benchmarked TTS / STT services (ElevenLabs, Deepgram, AssemblyAI, OpenAI Whisper, Play.ht) on latency, cost, and quality — getting latency to 90ms and word accuracy to nearly 95%.
- Built an adaptive simulation engine with multi-agent architecture on LangGraph (multi-step branching, RAG-powered personalization); integrated three LLM providers (OpenAI, Anthropic, Gemini) with dynamic model routing to cut inference spend.
- Designed a Zero-Knowledge proof system (Noir, Barretenberg, Garaga on StarkNet) for verifiable expert credentials in a decentralized evaluation marketplace; shipped a Chrome Extension streaming Google Meet audio into an automated AI evaluation pipeline.

Fractional CTO (Part-time, hands-on)

Rocking Product — Apr 2025 – Dec 2025 (part-time, parallel to KliverAI) — Remote

- Came in as Fractional CTO to an 8-engineer team and restructured it in the first quarter without stepping away from the code; stabilized release cadence and reduced sprint carryover.
- Built an image embeddings service (Azure AI Vision and CLIP) to improve product matching across brand comparisons, raising accuracy and lifting the client's revenue by 40%.

- Cut production bugs by 70% through team training and automated processes (testing, CI/CD, code review); optimized LLM and cloud spend by 45% via model selection, prompt compression, and semantic caching.
- Hired additional engineers, defined the hiring bar, and ran weekly public-speaking workshops to sharpen team communication and raise the quality of client meetings.
- Established code review standards, structured feedback practices, and CI/CD pipelines; introduced Spec-Driven Development (SDD) and AI-driven dev workflows with autonomous agents automating code review, testing, and deployment.
- Proposed and led a full-stack migration from a fragmented JavaScript codebase to .NET, modernizing the architecture for long-term scalability.

Lead Software Engineer (Blockchain / MEV)
Borderless Capital / CTF Capital — Sep 2021 – Mar 2025 — Remote

- Acted as technical lead for MEV infrastructure across EVM and Solana: owned architecture, code review, mentoring, and interviewing while remaining hands-on in Rust (tokio, async) and Python/Cython; helped build the blockchain team, which grew from 4 to 10 engineers.
- Migrated the system from Python / Cython to Rust and took it to 20x more transactions per second; pipelines processed 10K+ opportunities per day from $50M+ in daily on-chain flow and contributed $100K+ in attributable annual P&L with execution under 10ms.
- Ran technical due diligence on 5+ projects that ended up getting funded — architecture, risk, and feasibility — acting as the CTO's technical reference on the low-level side.
- Owned 24/7 production reliability and incident response, including on-call rotation, post-mortems, and observability ownership (Prometheus + custom Rust telemetry tracking 50+ real-time metrics).
- Built custom transaction delivery infrastructure with parallel broadcasting and direct validator/TPU routes (sub-slot Solana inclusion ~400ms); reverse-engineered Geth and Reth, contributing to the REVM community; designed strategy logic across 5+ DEXs and EVM/Solana cross-chain flow.

Senior Software Architect
Paramo Technology — Oct 2020 – Sep 2021 — Remote

- Owned the end-to-end architecture of a high-traffic online casino (iGaming) platform handling real-time money operations and regulatory reporting, working directly with the CTO.
- Spotted the issues slowing teams down and designed action plans that raised productivity by 40%, measured by features shipped and fewer errors.
- Designed and rolled out event-driven microservices using .NET handling real-time game state, wallet operations, and regulatory reporting; brought in Kubernetes to scale and built automated deploy pipelines.
- Implemented distributed tracing across all services (OpenTelemetry, Application Insights, Datadog) to catch bugs early and resolve production issues faster.
- Led part of the hiring and designed the technical entry exam; created and delivered internal training programs on architecture patterns, testing discipline, and operational best practices.

Software Architect
CloudX (Software Consultancy) — Sep 2017 – Oct 2020 — Remote / Buenos Aires (first employee)

- Was the company's first employee; led architecture decisions across several enterprise product lines, designing Angular/React frontends with reusable component libraries and Node.js / TypeScript and .NET microservices backends using Domain-Driven Design.
- Built a distributed system over geospatial data with PostGIS for a UK client; delivered technical training and conference talks to partners and internal teams.

Software Architect (Angular / .NET)
Majestic Hotel Group — Jan 2014 – Aug 2017 — Argentina

- Designed and shipped full-stack features in Angular and .NET for internal hotel management platforms, first as Team Lead and later as architect; led the migration from AngularJS to Angular 2.
- Redesigned the data model toward an event-oriented architecture, reducing coupling across integrations.

.NET Web Developer
Plus54 — 2011 – 2014 — Buenos Aires (earlier: Acsys 2009–2011, IBM 2008–2009)

- Early career: built .NET web applications, internal tooling, and mobile components end-to-end; integrated external APIs with unit testing and reliable data exchange patterns.

KEY ACHIEVEMENTS

Microsoft MVP, Developer Technologies — 8 consecutive years (2017–present), recognized for technical content and community contributions.
Net-Baires Founder — Founded and grew Argentina's largest .NET developer community to 100K+ members across 10+ years.
80+ International Technical Talks — .NET Conf, DevFest, NetCoreConf, vOpen, Global Azure Bootcamp, and meetups across LATAM and Europe.
Led teams of up to 8 engineers — Across blockchain, AI, and enterprise platforms, with full ownership of hiring, performance feedback, and delivery.
MEV Infrastructure at Borderless — Rust and Cython pipelines processing $50M+ in daily on-chain volume and contributing $100K+ in attributable annual P&L.
Polkadot Builder Program Graduate — Completed Polkadot Blockchain Academy in Lisbon, Portugal (2026).
Microsoft Student Partner — 5 years (2016–2021).

EDUCATION & CERTIFICATIONS

Microsoft Certified: Azure Solutions Architect Expert (AZ-305) — Microsoft
Microsoft Certified: Azure Associate (AZ-104 / AZ-204 level) — Microsoft
Microsoft MVP, Developer Technologies — Feb 2017 – Present (8 consecutive years)
Polkadot Builder Program — Polkadot Blockchain Academy, Lisbon, Portugal (2026)
Systems Engineer — Universidad Abierta Interamericana (UAI), Buenos Aires, Argentina (2017–2021)

OPEN SOURCE & COMMUNITY LEADERSHIP

Net-Baires (.NET Community) — Founder (2015–present). Argentina's largest .NET developer community, 100K+ members, 10+ years of monthly meetups and conferences.
Crypto Para Mortales — Founder (2023–present). Spanish-language blockchain and crypto education conference.
Patrones Para Mortales — Founder (2020–present). Educational content brand on software design patterns and architecture.
YouTube channel (youtube.com/@germankuber) — technical deep-dives on Rust, blockchain, AI, and software architecture.

SPOKEN LANGUAGES
