PROFESSIONAL SUMMARY

Senior full-stack engineer with 15+ years shipping production web and mobile applications end-to-end. Modern frontend stack: React 18 with concurrent rendering and Suspense, Next.js 14+ App Router with React Server Components and streaming hydration, TypeScript and JavaScript (ES6+), Tailwind CSS, Zustand and Tanstack Query for state and data. Solid Angular history including AngularJS-to-Angular migrations and enterprise apps, plus exposure to Vue.js and Svelte. Test-Driven Development (TDD) discipline with Jest, React Testing Library, Cypress, and continuous integration pipelines. Mobile experience with React Native in production, Expo, EAS, the new architecture (Fabric, TurboModules, Hermes), and native module integration. Backend across **Node.js (TypeScript, Express, NestJS)**, Python (FastAPI), and C# / .NET, with event-driven messaging (Apache Kafka, RabbitMQ, AWS SNS / SQS) and serverless on AWS Lambda. Strong sense of component design, reusable UI systems, accessibility (WCAG, Section 508), Web Vitals and performance optimization, and rendering pipeline tradeoffs. Owns features end-to-end and ships with attention to detail, clear thinking, and rigorous code quality. EU citizen (Spanish nationality) with full authorization to work across the EU/EEA — no visa or sponsorship required — open to self-funded relocation anywhere in the EU.

CORE EXPERTISE

Frontend (React Ecosystem): JavaScript (ES6+), TypeScript (advanced types, generics, type safety across data models), React 18 (hooks, concurrent rendering, Suspense, transitions), Next.js 14+ (App Router, React Server Components, streaming, hydration, ISR / SSR / SSG), component-driven architecture, reusable component libraries, design systems, accessibility (WCAG, Section 508, ARIA), responsive UI

Additional Frontend Frameworks: Angular (production: AngularJS through Angular 4, large-scale migrations and enterprise apps), Vue.js (exposure), Svelte (exposure)

State Management & Data Fetching: Zustand, Redux / Redux Toolkit (RTK Query), Tanstack Query (React Query), Context API, server state vs client state separation, optimistic updates, caching strategies, Zod schema validation, form handling (React Hook Form)

Mobile (React Native): React Native, Expo, EAS Build & Submit, new architecture (Fabric, TurboModules), Hermes engine, native module integration (Swift / Kotlin), React Native Testing Library, Detox (E2E), navigation (React Navigation, Expo Router), push notifications, offline-first patterns

Styling & UI Frameworks: Tailwind CSS, CSS3 (Grid, Flexbox, animations), CSS-in-JS, Material-UI / shadcn / ui, Storybook for component documentation, responsive design, dark mode and theming

Frontend Performance & Quality: Web Vitals (LCP, FID, CLS, INP), bundle size optimization, code splitting, dynamic imports, image optimization, lazy loading, rendering pipeline tradeoffs, hydration analysis, performance profiling (Chrome DevTools, React DevTools Profiler), Lighthouse audits

Testing & Quality: Test-Driven Development (TDD), Jest, React Testing Library (RTL), Cypress (E2E), Playwright, Vitest, unit + integration + E2E coverage, visual regression testing, accessibility testing (axe-core), continuous integration test pipelines

Build Tools & Tooling: Vite, Webpack, Turbopack, Babel, ESLint, Prettier, TypeScript compiler, npm / pnpm / yarn workspaces, monorepo patterns (Turborepo), AI-coding tools (Cursor, Claude Code, GitHub Copilot, MCP server integration)

Backend & APIs: Node.js (TypeScript, Express, Fastify, NestJS), Python (FastAPI, async), C# / .NET (ASP.NET Core, Entity Framework Core), REST, GraphQL, gRPC, OpenAPI / Swagger, OAuth 2.0 / OIDC, JWT, webhooks, real-time (WebSocket, SignalR, Server-Sent Events), event-driven messaging (Apache Kafka, RabbitMQ, AWS SNS / SQS, Azure Service Bus)

Cloud & Serverless: AWS (Lambda, S3, SNS / SQS, EventBridge, Bedrock, CloudFront), Azure (App Service, Functions, Static Web Apps, API Management), Vercel deployments and edge functions, Docker, Kubernetes, CI / CD pipelines (GitHub Actions, Azure DevOps)

Databases & SQL: SQL (PostgreSQL, MySQL / Aurora, MS SQL Server / Azure SQL), MongoDB, Redis (cache, pub-sub, streams), Cosmos DB, DynamoDB, query optimization, schema design, indexing strategies, migrations

AI-Integrated Frontends: LLM orchestration (OpenAI, Anthropic, Gemini), streaming responses, MCP (Model Context Protocol) server and client integration, LangGraph multi-agent flows, knowledge and code graphs (Neo4j, pgvector), RAG pipelines surfaced through UI, agentic platforms, Figma plugin development, AI-enhanced UX patterns

Programming Paradigms & Design: Object-Oriented Programming (OOP), Functional Programming, design patterns, architecture patterns, data structures, algorithm design, SOLID principles, clean code

Engineering Practices: Test-Driven Development (TDD), pair programming, code review, mentoring, technical interviewing, ADRs, design reviews, CI / CD, DevOps practices, Infrastructure as Code (Terraform), async remote collaboration, clear technical writing

PROFESSIONAL EXPERIENCE

AI Architect

Nera — Feb 2026 – Present (full-time) — Remote

- Own Nera's AI architecture: the knowledge and code-intelligence layer that lets the whole company query the business in natural language, and the agentic tooling product and engineering use to go from problem to spec.
- Built a code graph of the entire microservice fleet (66 repos, 77k nodes, 210k relationships across Java, TypeScript and Go), enriched with runtime calls from OpenTelemetry and served through a 32-tool MCP server that engineers use to design features and product uses to write PRDs.
- Designed and built a company-wide ontology (28 classes, 26 invariants) that ingests Notion, Jira and GitHub into a Neo4j knowledge graph plus a pgvector semantic index, giving every area end-to-end traceability from problem to PR and natural-language Q&A over MCP.
- Built an AI product-engineering platform where multi-agent LangGraph flows take a problem through PAD, PRD, epic and tech spec, grounded in the code graph and business knowledge.

- Built AI tooling for product and design: a Claude plugin for research, interview guides and synthesis, and a Figma plugin that audits screens against the design system.
- Made evals a release gate: record-and-replay harnesses, a 100-question benchmark for the knowledge graph, fidelity audits for the code graph and LLM-as-judge for generated PRDs.
- Drove Spec-Driven Development (SDD) across engineering with a shared framework (specs, TDD, review gates) that standardized how features are built and raised quality team-wide.

Independent AI Consultant — Agent Engineering & Enterprise AI Delivery
Self-employed (autónomo, Spain) — Mar 2026 – Jul 2026 (parallel to Nera) — Remote, client under NDA

- Forward-deployed AI consultant embedded with an enterprise engineering organization: worked directly with the customer to run discovery with business and technical stakeholders, architected the solution, and owned delivery from pilot through production and continuous iteration.
- Designed and shipped production agentic workflows on LangChain, LangGraph and Microsoft Agent Framework, testing each graph, running eval frameworks and eval suites against it, and monitoring it live in production.
- Owned the RAG platform end-to-end for internal company documentation — retrieval optimization, chunking and context engineering, plus regression test suites gating every change.
- Cut inference cost and latency through semantic caching, agent-level semantic memory, and dynamic model routing across providers.

Senior Full-Stack Engineer & Co-Founder
KliverAI (Own Venture, closed Feb 2026) — Mar 2025 – Feb 2026 (full-time) — Remote, Spain

- Built and shipped production frontends in React 18 + Next.js 14+ (App Router, React Server Components, streaming hydration) with TypeScript, Tailwind CSS, Zustand for client state, and Tanstack Query for server state.
- Designed and built a React Native mobile application (Expo, EAS) integrated with the same backend services; implemented native module integration and real-time streaming UI for voice AI experiences across iOS and Android.
- Rewrote the real-time layer from app-embedded SignalR to Azure SignalR Service with Redis-backed state, scaling concurrent users by 500% while holding sub-200ms TTFT on voice pipelines.
- Implemented reusable component libraries and a design system across web and mobile clients, with Storybook documentation, accessibility (WCAG) compliance, and dark mode theming.
- Built backend services in Node.js (TypeScript) and Python (FastAPI) integrating three LLM providers (OpenAI, Anthropic, Google Gemini) with dynamic routing, and developed event-driven serverless workflows on AWS Lambda + S3 + SNS / SQS + EventBridge.
- Benchmarked TTS / STT services (ElevenLabs, Deepgram, AssemblyAI, OpenAI Whisper, Play.ht) on latency, cost, and quality — getting latency to 90ms and word accuracy to nearly 95%.
- Integrated AI-coding tools (Cursor, Claude Code) and built MCP (Model Context Protocol) servers and clients to standardize tool access across LLM-powered workflows.
- Optimized Web Vitals (LCP, INP, CLS) through code splitting, dynamic imports, image optimization, and rendering pipeline tradeoffs; applied Test-Driven Development with Jest and React Testing Library, and instrumented frontend observability with custom telemetry.
- Collaborated with a small distributed team of up to 3 engineers, ran code reviews, made architectural decisions, and maintained hands-on ownership across the full stack.

Fractional CTO
Rocking Product — Apr 2025 – Dec 2025 (part-time, parallel to KliverAI) — Remote

- Came in as Fractional CTO to an 8-engineer team and restructured it in the first quarter without stepping away from the code; ran technical interviews and hiring decisions.
- Built an image embeddings service (Azure AI Vision and CLIP) to improve product matching across brand comparisons, raising accuracy and lifting the client's revenue by 40%.
- Cut production bugs by 70% through team training and automated processes (testing, CI / CD, code review).
- Proposed and led a full-stack migration from a fragmented JavaScript codebase to a modernized React 18 + Next.js frontend with .NET (ASP.NET Core, Entity Framework Core) backend.
- Built TypeScript-first React components, refactored state management, and improved rendering performance across the platform.
- Built and shipped a React Native mobile application to production (Expo, EAS) integrated with the same backend services, extending the product to mobile users.
- Built backend features in Node.js / TypeScript, Python (FastAPI, LangChain) and .NET; introduced Spec-Driven Development (SDD) and AI-driven development workflows.
- Optimized cloud infrastructure and LLM usage through semantic caching, prompt compression, and dynamic model selection, cutting combined cloud and API spend by 45%.

Lead Software Engineer (Distributed Systems)
Borderless Capital / CTF Capital — Sep 2021 – Mar 2025 — Remote

- Lead engineer for low-latency distributed systems in Rust (tokio, async), Python / Cython, and .NET (C#), processing 10K+ opportunities per day from $50M+ in daily transactional flow and contributing $100K+ in attributable annual P&L with execution under 10ms p99.
- Designed and built internal dashboards and operational tooling with TypeScript, React, and real-time data visualization for trading observability and incident response.
- Migrated the system from Python / Cython to Rust and took it to 20x more transactions per second.
- Built backend services and operational APIs in Node.js / TypeScript, .NET (C#) and Python; owned end-to-end production reliability including on-call rotation, post-mortems, and observability ownership (Prometheus, OpenTelemetry, custom telemetry).
- Contributed to code review, technical interviewing, and architectural discussions across the team, which grew from 4 to 10 engineers.

Senior Software Architect
Paramo Technology — Oct 2020 – Sep 2021 — Remote

- Owned the end-to-end architecture of a high-traffic online casino (iGaming) platform handling real-time money operations and regulatory reporting, working directly with the CTO.

- Spotted the issues slowing teams down and designed action plans that raised productivity by 40%, measured by features shipped and fewer errors.
- Designed and built event-driven microservices in .NET (C#, ASP.NET Core) for the platform handling real-time game state and wallet operations with strict consistency requirements; brought in Kubernetes to scale.
- Built React frontends consuming real-time APIs for operational and customer-facing surfaces, with TypeScript and component-driven design.
- Implemented distributed tracing (OpenTelemetry, Application Insights, Datadog); led part of the hiring and designed the technical entry exam.

Software Architect (Full-Stack)

CloudX (Software Consultancy) — Sep 2017 – Oct 2020 — Remote / Buenos Aires (first employee)

- Was the company's first employee; built full-stack enterprise products end-to-end: Angular (AngularJS through Angular 7+) and React frontends with reusable component libraries and TypeScript, backed by Node.js / TypeScript and .NET (C#, ASP.NET) microservices using Domain-Driven Design and Clean Architecture / Hexagonal patterns.
- Led the Angular practice across multiple product lines, including AngularJS-to-Angular migrations, shared component libraries, NgRx state management, and RxJS reactive patterns.
- Built a distributed system over geospatial data with PostGIS for a UK client.
- Worked directly with clients: led requirements gathering, technical adoption sessions, and delivered training programs and conference talks to partners and internal engineering teams.

Software Engineer (Angular / .NET)

Majestic Hotel Group — Jan 2014 – Aug 2017 — Argentina

- Built full-stack features in Angular and .NET for hotel management platforms, first as Team Lead and later as architect; led the migration from AngularJS to Angular 2 across the product suite.
- Redesigned the data model toward an event-oriented architecture, reducing coupling across integrations.

.NET Web Developer

Plus54 — 2011 – 2014 — Buenos Aires (earlier: Acsys 2009–2011, IBM 2008–2009)

- Early career: built .NET web applications, internal tooling, and mobile components end-to-end; integrated external APIs with unit testing and reliable data exchange patterns.

KEY ACHIEVEMENTS

Microsoft MVP, Developer Technologies — 8 consecutive years (2017–present), recognized for technical content and community contributions across the .NET and Microsoft ecosystem.

Microsoft Certified: Azure Solutions Architect Expert (AZ-305) — Senior-level Azure architecture credential covering identity, governance, monitoring, data, business continuity, and infrastructure design.

Net-Baires Founder — Founded and grew Argentina's largest .NET developer community to 100K+ members across 10+ years.

80+ International Technical Talks — Conferences and meetups across LATAM and Europe on full-stack engineering, architecture, AI, and software design.

Co-Founder & Lead Engineer at KliverAI — Built and shipped an AI training platform 0-to-1 with full-stack web and mobile delivery on a modern React + Next.js + Node.js + Python stack.

Polkadot Builder Program Graduate — Completed Polkadot Blockchain Academy in Lisbon, Portugal (2026).

Microsoft Student Partner — 5 years (2016–2021).

EDUCATION & CERTIFICATIONS

Microsoft Certified: Azure Solutions Architect Expert (AZ-305) — Microsoft

Microsoft Certified: Azure Associate (AZ-104 / AZ-204 level) — Microsoft

Microsoft MVP, Developer Technologies — Feb 2017 – Present (8 consecutive years)

Polkadot Builder Program — Polkadot Blockchain Academy, Lisbon, Portugal (2026)

Systems Engineer — Universidad Abierta Interamericana (UAI), Buenos Aires, Argentina (2017–2021)

OPEN SOURCE & COMMUNITY

Net-Baires (.NET Community) — Founder (2015–present). Argentina's largest .NET developer community, 100K+ members, 10+ years of monthly meetups and conferences.

Patrones Para Mortales — Founder (2020–present). Educational content brand on software design patterns and architecture.

Crypto Para Mortales — Founder (2023–present). Spanish-language blockchain and crypto education conference.

YouTube channel (youtube.com/@germankuber) — technical deep-dives on full-stack engineering, .NET, AI, architecture, and Rust.

SPOKEN LANGUAGES

Spanish: Native — English: Full Professional Proficiency — daily use in international remote teams
